Launch of Your Monitoring Bra

Dear Stacey

I want to congratulate you on the announcement this week of Textronics heart monitoring bra. Vikram had informed me about the upcoming launch a few weeks ago after the IFAI conference. It sounds like Textronics is having a great first year.

Stacey, based on the press reports, I am compelled to again remind you that Sensatex owns the rights to a number of patents related to the use of textiles to collect sensory information from the body. As you will remember we discussed this in Barcelona both privately and the subject was a major part of my Sensatex presentation. I also informed one of your investors, Unilever, of this when I made a presentation to them early this year. Based on Vikram's observation of the bra at IFAI and what I have read in your release, we believe that your product is interfering with Sensatex patent rights. We formally notified a number of our competitors of our intellectual property rights by letter earlier this year, but I did not think it was necessary to write you about it given our earlier conversation. I am happy to send you a similar letter setting forth the patents we hold for assessment by your IP law firm. I am also happy to put my IP law firm together with your counsel so that you can sort through this issue.

As you know, I have spent the past 18 months working to save Sensatex and launch the commercial SmartShirt (which will be announced in the next six weeks). We have three other products we are working toward launching in the next 18 months, one of which is a SmartBra. All of this work will have been valueless if we allow competitors to walk all over the intellectual property rights that were the cornerstone of the investments made in Sensatex. Based on my knowledge of the products Textronics has in development, I believe it will be difficult for Textronics to launch any product that senses signals from the body using conductive fibers that does not interfere with Sensatex's IP rights. Thus I'd like to explore with you how the two companies can work together to resolve this problem. I believe it is in the best interests of our shareholders to find a solution to this issue as soon as possible so that we can both focus on building our businesses and not battling about ownership rights.

Best regards
-Bob
